

Logitech and WildTangent Debut Force Feedback for Online Games

Logitech Includes WildTangent Games with Product Software

REDMOND, WA, November 6, 2002 - Logitech (Nasdaq:LOGI) (Switzerland: LOGN, LOGZ) announced today it has teamed with WildTangent, Inc., the leading provider of enabling technology and services for premium online games, to deliver force feedback to mass market online games. In addition, Logitech is now shipping the WildTangent GameChannel with its gaming devices, keyboards, mice and trackballs. The GameChannel provides access to a suite of seven popular WildTangent games, including two force feedback-enabled games, Blackhawk Striker and Space Rocks.

The addition of WildTangent's GameChannel to Logitech's installation CD provides Logitech customers immediate access to premium arcade, simulation, puzzle, strategy and combat games after they install their new Logitech devices. Logitech users can try all the games for free and unlock the full versions by purchasing an unlock code from the Logitech GameChannel website. Prices for full versions range from \$14.99 to \$19.99.

"Fast action force feedback adds a new dimension to games online and completes the experience, allowing players to feel the action and be more involved," said Fred Swan, Director of Marketing for Logitech's Interactive Entertainment Business Unit. "The inclusion of WildTangent's GameChannel with our devices lets gamers immerse themselves more completely in their online play."

"WildTangent is pleased to join forces with Logitech to deliver cutting-edge online games with its state-of-the-art products," said Alex St. John, CEO and founder of WildTangent. "Realistic force feedback is one of the hottest gaming technologies and we're excited that game developers can now include force feedback in their online games developed on WildTangent's Web Driver platform."

The two force feedback games, Blackhawk Striker and Space Rocks, will allow players with a Logitech WingMan Force™ 3D joystick or RumblePad™ to feel more action, intensity and realism. In WildTangent's popular high-action helicopter shooter, Blackhawk Striker, players will feel the recoil of their helicopter as they pummel enemy tanks, aircraft and other ground vehicles using Logitech's latest joystick devices. With a Logitech RumblePad in hand, players of the classic arcade game, Space Rocks, will feel their spacecraft dodge and blast space amoebas, aliens and kamikaze nukes.

About the WildTangent GameChannel The WildTangent GameChannel is a one-stop center for Web Driver-powered arcade, simulation, puzzle, strategy, racing and role-playing games. Once installed, users can access their WildTangent games directly from their program menu. The GameChannel also notifies users when new game releases are available. Logitech joins a list of companies providing consumers

with easy access to WildTangent's GameChannel, including world-class ISPs, portals and PC manufacturers.

About Force Feedback Force feedback is a sophisticated method for providing people with realistic tactile feedback from a PC or console. It is widely used in medical, space and flight simulators to provide lifelike training for students and professionals who make split-second decisions based not just on sight and sound, but also on their sense of touch. This cutting-edge technology has been extended to PC and next-generation console gaming over the last five years. Force feedback is even richer, more realistic and engaging than the non-directional vibration feedback to which many gamers are accustomed. Through the use of advanced software and electronics, force feedback can move a steering wheel or joystick as if the device were subject to real external forces.
